Is your data protected?

Protecting your data is critical to your business. Even one day of data loss can result in hours of reentry and lost productivity, and that's being optimistic. Without an effective data protection plan including disaster recovery, businesses risk severe loss of data, loss of productivity, and high recovery costs.

Why LiveBackup?

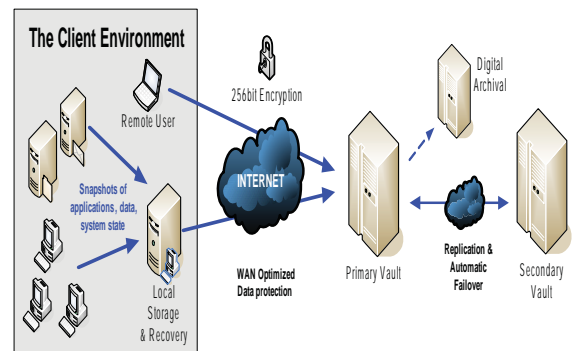

- Protect servers, desktops and laptops
- Fast and Easy Recovery
- On-Site Virtualization
- Off-Site Virtualization
- Continual Data Testing
- Bandwidth Throttling
- Bare Metal Restore

LiveBackup provides clients a solid backup solution with various business continuity options. It is an enterprise class Business Continuity backup and recovery solution priced for small and mid-sized businesses.

With the potential of disaster from natural sources, employee sabotage or simply a wrong keystroke, it is now crucial for all businesses to have a solid remote backup and business continuity plan for their business.

With backup and storage redundancy, LiveBackup is the most reliable source for complete recovery of business IT environments. Our local storage appliance allows instant data restoration and server virtualization in the event of local data loss or local server failure.

With LiveBackup we provide clients an end to end business continuity solution for IT. We provide everything from full data protection and long term digital archiving to a fully tested and readily available environment that is easily accessible via the web. Our CORE-Validate end to end testing process ensures that your business is prepared for quick recovery from any type of disaster.

LiveBackup pricing is based on data store size. Contact us for a quote.
