

McAfee SaaS Email Inbound Filtering & Continuity

In-the-cloud email filtering and availability for a productive business

McAfee® SaaS Email Inbound Filtering & Continuity is a cloud-based solution that works with your existing on-premise email gateway. It blocks more than 99 percent of spam, viruses, and fraudulent messages before they reach your network. And in the case of a planned or unplanned outage, this service enables continuous web-based email access, management, and use.

Protect email—and email access—the simple way

McAfee SaaS Add-on Email Inbound Filtering & Continuity enables you to:

- Keep employees connected and productive
- Block threats before they reach your network
- Provide access even when your mail server is unavailable
- Maximize your on-premise email gateway investment

Your on-premise gateway does a great job of securing your outgoing email messages and stopping outbound data loss. However, you also need a way to manage the thousands of messages coming into your email infrastructure—preferably one that doesn't waste precious network bandwidth and doesn't divert IT resources from strategic business initiatives.

McAfee SaaS Add-on Email Inbound Filtering & Continuity works with your McAfee Email Gateway or McAfee Email & Web Security Appliance to block unwanted email before it reaches your network and ensure access even when your email server is unavailable. Best yet, as a cloud-based service, there's no hardware to buy, no software to install, no backup tapes to mount, and no maintenance to perform.

Block more than 99 percent of spam

Block over 99 percent of spam and radically reduce the costs associated with contamination, remediation, wasted bandwidth, and unnecessary storage. Our Stacked Classification Framework® uses a patented multilayered technology to determine the probability that an email is spam.

Each of the 20 separate layers of filtering has a set of unique strengths designed to identify and stop specific threats. This combination creates one of the most accurate and comprehensive filtering processes in the industry.

Our spam defense includes a premium anti-spam multi-language filter, which protects against real-time spam attacks and zero-hour spam, regardless of language. Perimeter IP filtering provides additional security against image-based spam, web-based threats, blended threats, and fraudulent phishing emails.

Count on triple scanning to effectively block viruses and worms

Proprietary WormTraq® worm detection technology identifies and intercepts zero-hour mass mailing worms before they enter your corporate network. Powered by McAfee Global Threat Intelligence, our industry-leading signature-based anti-virus engine detects and blocks viruses before they ever become network threats..

Protect against email attacks

Our complete solution shields your network and critical messaging gateways from email attack, instantly blocking denial of service and other SMTP-based attacks, including directory harvest attacks, email bombs, and channel flooding.

Affordable, manageable messaging security and continuity

- No hardware or software to buy, maintain, manage, or update
- No upfront capital outlay
- No setup or upgrade fees
- Automatic engagement and synchronization for seamless continuity
- 60 days of unlimited rolling storage at no extra charge
- Simple web-based administration
- 24x7 customer support at no extra charge

Automatically filter email content and attachments

Reduce corporate risk with intelligent message processing that identifies, quarantines, and blocks unwanted, malicious, and sensitive content and attachments.

Protect against fraud

Automatically filter out phishing scams and other illegitimate emails before they reach your employees to keep them safe from the risks of fraud.

Maximize your on-premise email gateway investment

You've made a smart investment in your McAfee Email Gateway or McAfee Email Security Appliance. The SaaS Email Inbound Filtering & Continuity solution integrates easily and effectively with your on-premise email gateway to ensure comprehensive messaging protection.

Deliver messages with an additional layer of security

For organizations that require a higher level of security for inbound email, our Transport Layer Security (TLS) protocol filters encrypted inbound messages and delivers them across a secure tunnel when recipients are TLS-enabled. If a recipient is unable to receive a TLS encrypted message, the email is delivered using standard SMTP.

Ensure email availability and protection—no matter what

Business doesn't stop when your email network experiences an outage. Whether the network is inaccessible due to natural disasters, power outages, or even regular maintenance, SaaS Email Inbound Filtering & Continuity keeps your employees, customers, partners, and suppliers connected 24x7.

Our cloud-based, automatic rolling email storage provides your business with an essential safety net. If your own email servers become unavailable, you can still use our secure, easy-to-use web interface to send and receive messages, search for and retrieve stored messages, and manage quarantines and message stores just as you would in your normal live environment.

Because the service is fully integrated and managed by McAfee, your inbound email protection continues without interruption. And the service retains all messages sent or received during the outage, intelligently synchronizing an accurate record of all outage-period message activity when your own email servers come back online.

Seamless email continuity helps protect your business reputation, operations, and productivity at all times, providing:

- Inbound message filtering
- Automatic service engagement when an outage is detected
- Access to email received during an outage via a secure web interface
- Full email functionality, including read, compose, reply, forward, and delete
- 60 days of unlimited rolling storage
- Intelligent post-outage email activity synchronization
- Outage notifications and system updates

Streamline email management

With an integrated web-based console, you get reliable email security and continuity without the management burden.

Gain unparalleled support services

SaaS Email Inbound Filtering & Continuity includes automated, around-the-clock threat monitoring and protection. Experts at McAfee Labs use McAfee Global Threat Intelligence to monitor web traffic trends and provide you with real-time updates and protection.

Finally, the McAfee support team is available to answer your account and billing questions via a toll-free phone number or online 24 hours a day, seven days a week.
